Green Architecture - Building a Sustainable Future

In the EU the building sector is the largest energy consumer; the construction sector is accountable for 35% of waste generation, and requires vast amounts of resources. However, with progress in designs and research that enable better efficiency and material use, there is significant potential in the buildings and construction sector to reduce greenhouse gas emissions and to minimize the overall negative environmental impact. What efforts are being made in the recent architectural processes? How can energy efficiency be improved and what are the materials of the future?

Let us discuss the topic of green architecture across borders with the following experts:

David Cook is the Founding Partner at haascookzemmrich STUDIO 2050 in Stuttgart, **Germany**. The architecture firm pursues human-friendly, environmentally responsible solutions to Urban Planning and Architectural Projects worldwide. David Cook was also co-curator of the highly successful touring exhibition "Ecology, Design, Synergy" through Germany.

Zsombor Barta is responsible for International Relations as senior par-

liamentary advisor at the National Council for Sustainable Development **Hungary**. Further, he is the Founding Partner of Greenbors Consulting Ltd & Spacefor Ltd, companies both focusing on sustainability strategy developments, smart city and sustainable urbanisation issues. Zsombor is also Director of Sustainability at Tomlin Ltd and is the current President of the HuGBC.

Iván Jiménez Acosta has an international professional and academic background from Germany, China, Spain, Chile, France, Mexico and United States. He graduated from the Gerald D. Hines College of Architecture at the University of Houston (USA) with a Bachelor of Architecture, B.S. in Environmental Design along with a Construction Management Minor Degree. Prior to joining haascookzemmrich in Stuttgart, **Germany** in 2018, Iván gained professional experience at Intexure Architects, Houston, SFP Architecten, Stuttgart (DE), Fluxá & Haas Arquitectos, Concepcion (CL) and Metalab, Houston.
